Question 1 | Correct Mark 1.00 out of 1.00

Convert the following algorithm into a program and find its time complexity using counter method.

```
void reverse(int n)
{
   int rev = 0, remainder;
   while (n != 0)
    {
        remainder = n % 10;
        rev = rev * 10 + remainder;
        n/= 10;

    }
print(rev);
}
```

Note: No need of counter increment for declarations and scanf() and count variable printf() statements.

Input:

A positive Integer n

Output:

Print the value of the counter variable

Answer:

Reset answer

```
#include<stdio.h>
int count = 0;
void reverse (int n){
    int rev=0,rem;
    count ++;
 count++;
    while (n!=0){
        count++;
        rem=n%10;
        count ++;
        rev=rev*10+rem;
        count++;
        n/=10;
        count ++;

    }
    count++;
}
int main(){
    int n;
    scanf("%d",&n);
    reverse (n);
    printf("%d",count);
}
```
