Question 1 | Correct Mark 1.00 out of 1.00

Problem Statement:

Given a sorted array and a value x, the floor of x is the largest element in array smaller than or equal to x. Write divide and conquer algorithm to find floor of x.

Input Format

First Line Contains Integer n – Size of array

Next n lines Contains n numbers – Elements of an array

Last Line Contains Integer x – Value for x

Output Format

First Line Contains Integer – Floor value for x

Answer: (penalty regime: 0 %)

```c
#include <stdio.h>
int floorvalue(int a[],int l,int r,int x){
    if(l>r){
            return -1;
    }
    int mid=(l+r)/2;
    if(a[mid]==x)
    return a[mid];
    if(a[mid]<x){
        int ans=floorvalue(a,mid+1,r,x);
        if(ans==-1)
        return a[mid];
        else
        return ans;
    }
    return floorvalue(a,l,mid-1,x);
}
int main(){
    int n,x;
    scanf("%d",&n);
    int a[n];
    for(int i=0;i<n;i++){
        scanf("%d",&a[i]);
    }
    scanf("%d",&x);
    printf("%d",floorvalue(a,0,n-1,x));
    return 0;
}
```
